

SAGE 100 MANUFACTURING

An Automation Solution That Gets The Most Out Of The Production Floor and ERP System

Tracking production in your Sage 100 ERP system can be challenging if you are unaware of inventory levels for finished products and their raw components. Alleviate these issues by providing your workers handheld scanners to record finished products and indicate the quantity produced with ScanForce's Sage 100 Manufacturing Automation.

Key Features:

Seamless Integration

Out-of-the-box and no hassle to be up and running.

Wireless Functionality

Access information whenever and wherever needed, with transactions being automatically populated.

Time & Labor Tracking

Manage and track labor costs for your Key Performance Indicators.

Bill of Materials

Perform a quick production entry by scanning the finished product, or scan each component to validate the entire production process.

Work Order Tracking

Automatically know what inventory has been used and see finished products available in inventory.

Production Management

Automatically capture material issues and completions with barcode scanning for accurate and up-to-date information.

Why ScanForce?

ScanForce develops software solutions for Sage 100 users. Our warehouse management, manufacturing automation, inventory control, and mobile sales software empowers users to increase accuracy and efficiency, optimize workflows and improve profitability.
