

True Cloud Construction Software Gives Subcontractors and Specialty Contractors Access to Business-Critical Information Anytime, Anywhere

Seamlessly link the field and office to capture and manage labor, material costs, and inventory in one cohesive solution.

Construction projects are a sea of moving parts. As a subcontractor or specialty contractor, your ability to complete projects on time and within budget depends entirely on the level of collaboration between your central office and your field staff.

Whether you are tracking materials to and from job sites or managing time and materials on your plumbing, HVAC, electrical, mechanical, and other projects, you need accurate, timely project data. Insightful data is the key to making strategic decisions that move projects and your business forward. Unfortunately, running a business with disconnected project teams results in delayed project updates, duplicate data entry, greater risk of errors, and unnecessary costs.

With Acumatica's true cloud construction software, you can easily manage your customers, finances—including job cost accounting—field teams and service teams in one cohesive solution. The bottom line is increased visibility, team collaboration, and profitability on every project.

Easily manage projects and budgets

KEY BENEFITS

GAIN COMPLETE CONTROL, MAXIMIZE PROFITABILITY

- Run more profitable projects by accurately forecasting and managing job costs, payroll, overhead, profit, cash, and much more

FOCUS ON THE PROJECT, NOT THE PAPERWORK

- Grow your business without adding to your IT budget
- Get the latest software updates at no additional cost

GET THE BEST OF ALL WORLDS WITH CONNECTED CLOUD

- Integrate seamlessly with best-of-breed applications
- Connect to ProEst, Procore, Microsoft Office, DocuSign, CFMA Benchmark, and many more

KEY FEATURES

Financial Management	Robust financials are simple enough for smaller contractors, yet scalable for more complex needs. Acumatica Financial Management has standard financial processes (GL/AP/AR) and reports. Multi-company, multicurrency, intercompany accounting, fixed assets, recurring and deferred revenue, and cash management are also available.
Job Cost Accounting	Easily manage AP workflows, from entering an invoice through approval routing and checks. Seamless customer billing, driven by real-time project costing, includes up-to-date labor, material, equipment, and other costs. Proactively identify problem areas in current jobs and improve future projects estimates.
Project Management	Gain a complete view of project details—including real-time field updates—providing instantaneous information between your project management team, back-office workforce, and management. Easily manage and track all activities, issues, changes, project documents, and job costs from one central area.
Payroll	Flexible payroll adapts to any construction organization. This solution supports multiple unions, locals, classes, benefit packages, complex wages, certified wages, executive compensation, and commission structures.
Commitments	Control cost overruns by automating project commitments and change order processes. Create and track subcontract status, purchase orders, budgets comparisons, line-item committed costs, and payments.
Compliance	Effectively manage lien waivers and releases, insurance certificates, and status updates, providing expiration and other alerts to staff and suppliers.
Customer Relationship Management	Easily see real-time data on all customer activities, including quotes, orders, invoices, payments, support cases, and service calls. Acumatica CRM also includes a self-service customer portal that lets customers access the information they need.
Mobile App	Get anytime, anywhere access. Quickly see critical reports on phones and tablets and give field teams and subcontractors tools to electronically enter employee time and equipment details. Access the complete system over any device and search for all project details from one global search box.
Advanced Material Management	Streamline the management of project materials, including receipts and issues for purchased materials. Create requisitions with approvals workflow and create purchase orders to ship materials directly to a project location, creating an efficient workflow for job site deliveries.
Change Management	Control cost overruns by automating project commitments and change order processes. For example, manage back charges or reduction in vendor commitments through the entry of a negative change order. Drop-ship workflows connected to change orders improve business workflows.
Progress Billing	Flexible progress billing by quantity like linear or square footage reduces project owner risk while allowing customers to meet their unique business needs.
Project Cost and Revenue Tax Zones	Simplify the process of calculating taxes for a project – tax zones are specified directly in the project and automatically retrieved and calculated for all invoices, purchase orders, subcontracts, and expenses.
